PROFILE SUMMARY

Data-focused engineer with hands-on experience building ETL pipelines, interactive dashboards, and statistical analyses on large-scale datasets. Built a 132K+ record climate analytics pipeline with choropleth visualizations across 3,000+ locations at Infosys Springboard. Strong SQL and Python (Pandas/NumPy) foundation, with a working knowledge of predictive modeling and cloud-based data infrastructure on AWS.

EDUCATION

- Amrapali University – Bachelor of Technology in CSE (AI/ML).
- Expected Graduation (August 2028).

TECHNICAL SKILLS

Languages : Java, Python, C, SQL, HTML/CSS, Javascript

Data Analysis : Pandas, NumPy, Excel, Statistical Analysis (correlation, anomaly detection, percentile analysis)

Machine Learning : Scikit-Learn, Pandas, Numpy, tensorflow, Regression Modeling

Visualization and Analytics : Tableau, PowerBI, Streamlit, Plotly, Seaborn, Matplotlib, Excel

Databases and Cloud : MySQL, Flask, Generative AI(LLMs), AWS (Lambda, S3, Textract, Bedrock), ETL, Docker

Core Concepts : Data Structures and Algorithms, APIs, Mathematics

EXPERIENCE

Software Developer Intern

Buimb Research, Uttarakhand | 6-Month | June, 2026 - Present

- Developing an AWS-based hosting and deployment platform for the Buimb Digital website, supporting web, application, VPS and cloud hosting. Contributing to cloud architecture, AWS configuration, deployment workflows, security, testing, troubleshooting and technical documentation.

Data Visualization Intern

Infosys Springboard | Feb 2026 – April 2026)

- Built Climate Scope — automated ETL pipeline (Python/Pandas) ingesting 132K+ weather records; interactive Streamlit/Plotly dashboard with choropleth maps across 3,000+ locations.
- Conducted rigorous statistical analysis identifying 99th-percentile extreme weather anomalies, seasonal trends, and variable correlations across large-scale global datasets.

Data Science and AI/ML Intern

(YBI Foundation | Jan 2025 – March 2025)

- Built Weather Prediction Model - regression-based ML model achieving 92% R^2 accuracy on 10,000+ historical records; optimized preprocessing pipelines cutting training time by 20%.

PROJECTS

Smart doc-Renamer

(AWS Lambda, Amazon S3, Amazon Textract, Amazon Bedrock, Python, API Gateway)

- Built serverless data pipeline to extract text from PDFs using Amazon Textract OCR, structuring output for downstream use
- Integrated Amazon Bedrock (LLM) to auto-generate standardized filenames from extracted document content
- Designed batch processing workflow delivering results as downloadable ZIP via presigned S3 URL, exposed through API Gateway
- Resolved production issues including IAM permission scoping, CORS errors, and API Gateway integration failures

Climate Ride Pipeline

Python, dbt, PostgreSQL, FastAPI, React, GitHub Actions, Vercel

- Built automated data pipeline (443K+ records) using bronze/silver/gold architecture, orchestrated via GitHub Actions
- Enforced data quality with dbt tests (uniqueness, null checks) in CI
- Cut processing time from 6+ hours to under 2 minutes via batch inserts
- Deployed serverless FastAPI backend and React frontend on Vercel with PostgreSQL (Neon)
- Resolved production issues in database connectivity and API routing

Anime and Movie Recommendation Systems

Python · Scikit-Learn · Cosine Similarity

- Deployed Cosine Similarity algorithms processing tens of thousands of user preferences to deliver highly personalized suggestions efficiently.
- Engineered a scalable content-based recommendation engine utilizing Python, Pandas, and Scikit-Learn.

Open Source Contributions

pgmpy — Probabilistic Graphical Models library (backed by GC.OS, official GSoC org)

- **PR #3310** (merged): added configurable edge-reversal penalty to SHD metric for weighted causal graph comparison
- **PR #3330** (merged): migrated 92-file citation system to sphinx-contrib-bibtex, built centralized BibTeX reference database (113 entries)
